SENIOR FULL STACK DEVELOPER / AI ENGINEER

Senior Full Stack Developer / AI Engineer with 7+ years of experience delivering backend, full-stack, cloud, and AI-driven solutions in enterprise environments. Hands-on in Java, Spring Boot, TypeScript, Next.js, AWS, Python and LLM-based automation, with a strong focus on operational efficiency, engineering productivity, and business-critical systems.

EDUCATION & CERTIFICATIONS

- **AWS Certified Generative AI Developer** - Professional (2026) - [Credly](#) ↗
- **AWS Certified AI** - Practitioner (2026) - [Credly](#) ↗
- **AI devs 3 Reloaded** - Advanced AI Agents & LLM Systems (2025)
- **AWS Certified Developer** - Associate (2024) - [Credly](#) ↗
- **Gdańsk University of Technology** - Electronics and Telecommunication *Bachelor of Engineering* (2019)

TECHNICAL SKILLS

Back-end: Java 8 / 21, Spring, Spring Boot, Python, Hibernate, RxJava
Mobile (Android)

Frontend / Full Stack: TypeScript, Next.js

Integration: Kubernetes (OpenShift), Spring Integration, Mule ESB,
ActiveMQ, RabbitMQ, Kafka

Databases: Oracle Database, Apache Ignite, MySQL, PostgreSQL,
InfluxDB, IBM Db2, MongoDB

AI & LLM: LangChain, n8n, RAG (ElasticSearch), GitHub Copilot, MCP

Containerization: Docker, Docker-Compose

Cloud (AWS): EC2, EBS, IAM, RDS, S3, CloudWatch, Lambda, Step
Functions

Continuous integration: Git, GitHub Actions, Jenkins, Bamboo,
ArgoCD, Maven, Gradle, Nexus, Terraform

Scripting: Linux, Bash

Tests: JUnit, WireMock, Mockito

Monitoring: Grafana, Telegraf, Prometheus, Kibana, Elasticsearch,
Graylog

Tools: Atlassian Stack (Jira, Confluence), IntelliJ IDEA, Android Studio,
SonarQube, OpenCode

Languages: Polish (Native), English (C1)

PROFESSIONAL EXPERIENCE

Senior Full Stack Developer / AI Engineer - Mercedes-Benz

04.2024 - Present

Developing a large-scale full-stack system (Next.js + Spring Boot) with end-to-end ownership across application development, AWS infrastructure, and CI/CD. Leading AI-driven solutions, designing and integrating LLM-based automation to reduce operational costs and improve engineering efficiency.

Key Achievements:

- **AI-powered automation for image verification and change-risk assessment** - Designed and implemented an automation solution that reduced repetitive manual work related to image verification and updates, **saving ~2 team-days** per sprint and increasing feature delivery capacity.
- **RAG for OPS efficiency** - Designed and implemented a RAG-based knowledge system for operational documentation, **reducing dependency on senior engineers** and improving ticket resolution time.
- **Large-scale codebase translation** (ongoing) - Leading the translation of a large legacy codebase from German into clear, maintainable English using GitHub Copilot, MCP, and RAG-based domain context, improving maintainability and developer onboarding.

Core Scope:

- **Backend engineering in Java** - Designed, developed, and refactored backend systems in Java and Spring Boot, improving scalability, maintainability, and architecture quality.
- **End-to-end full-stack delivery** - Built full-stack features across frontend and BFF layers using TypeScript and Next.js.
- **Cloud-native development on AWS** - Contributed to the development and integration of cloud solutions using AWS Lambda, SNS, DynamoDB, OpenSearch, and RDS.
- **Infrastructure, DevOps, and CI/CD ownership** - Managed infrastructure with Terraform, optimized CI/CD pipelines, and ensured production monitoring and operational stability.
- **AI-driven operational solutions** - Designed and delivered AI-based tooling in Python and LangChain to streamline operations and reduce manual effort.

Senior Java Developer - Volkswagen

11.2022 - 04.2024

Developed Android applications for assembly-line defect detection, focusing on performance, reliability, and production support. Contributed to CI/CD, monitoring, and security tooling in a large-scale automotive environment.

Key Achievements::

- **Developed and enhanced Android features** (Java, RxJava, MVVM) for real-time defect detection on the production line.
- **Improved CI/CD pipelines** (Bamboo) and integrated SonarQube, increasing build reliability and code quality.
- **Conducted 20+ technical interviews** for Java developers, contributing to team scaling and hiring quality.
- Implemented monitoring and alerting using AWS CloudWatch, improving incident response and system visibility.
- **Automated backup processes** (Bamboo + S3), increasing system reliability and data safety.
- **Deployed and configured security scanning tools** (Black Duck on EC2) for license compliance and vulnerability detection.

Java Developer - Silky Coders powered by LPP

10.2020 - 10.2022

Worked on a mission-critical integration platform that supported the company's shift to e-commerce during the COVID-19 pandemic, when online sales became essential to business continuity. Contributed to backend development, production support, and the gradual transition of selected components toward microservices.

Core Scope:

- Developed integration services using synchronous and asynchronous communication patterns with ActiveMQ.
- Contributed to rewriting parts of the platform into microservices.
- Supported production deployments and monitored the production environment to detect and resolve anomalies.
- Configured and maintained Kubernetes and Jenkins to support delivery and operations.
- Built monitoring dashboards in Grafana and supported database maintenance and migrations.
- Improved performance by reducing database round-trips with Caffeine caching.

Junior Java Developer - Catobe

04.2020 - 10.2020

Built backend solutions tailored to the needs of bailiff offices, contributing to systems that improved communication between bailiff offices and banks. Worked on libraries based on the OGNIVO API and on an application enabling near-instant document exchange secured with qualified electronic signatures.

Core Scope:

- Developed backend features and libraries in Java based on the OGNIVO API.
- Collaborated directly with clients to understand business needs and translate them into technical solutions.
- Refactored and optimized existing code.
- Prepared and maintained technical documentation for implemented modules.
- Designed and developed new features and supported database maintenance and migrations.

Software Engineer - Intel

04.2019 - 03.2020

Performed manual and automated testing for UEFI/BIOS on Intel processors. Developed C# automation scripts and created test plans and test cases to improve coverage and support defect detection.

Core Scope:

- Developed C# scripts for test automation.
- Created test plans and test cases based on requirements and project documentation.
- Identified, reproduced, and reported defects using HSDS and Jira.
